Proceedings of the American Institute of Electrical Engineers Volume 26, p. 2 American Institute of Engineers
This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1907 Excerpt: ...wheel, a trouble which will occur at times with all locomotives having independently driven axles if equipped with powerful enough motors, because of variation in motor characteristics, track and wheel conditions, and unequal wheel pressure caused by the drawbar pull. Almost the entire weight of the locomotive is spring-borne, and the behavior of the machine on curves even at high speeds ought to be very satisfactory. The same general constructicn would lend itself very effectively to the application of hightension inter-pole direct-current motors, and may be very seriously considered in this connection. The general characteristics of the New York Central type of locomotive (Fig. 4) the Batchelor machine as developed by the General Electric Company, is pretty generally understood, and my description will be limited. It consists essentially of a heavy steel frame in which are journaled four main axles, and which is terminated by pivoted single-axle ponies provided with spring resistance against deflection from the central position. The motors are the gearless type, the armatures being mounted directly on the axles, (Fig. 32) and the bi-polar field-magnets forming an integral part of the main frame; they are, therefore, carried with it by the equalizing springs, and have free motion relative to the armatures. In addition to the regular truck frame, an additional path is provided for the magnetic flux, which passes through all the armatures and field poles in series, by a heavy bar extending the length of the frame and carried above the motors. Being of the two-pole type, (Fig. 33) and with a quadrant winding, the motors are extraordinarily free from sparking tendencies; in fact, they are, structurally, natural 1200-volt machines, although only wound for prese...

From reader reviews:

Paula Mayo:

The reserve untitled Proceedings of the American Institute of Electrical Engineers Volume 26, p. 2 is the book that recommended to you to learn. You can see the quality of the guide content that will be shown to an individual. The language that publisher use to explained their ideas are easily to understand. The copy writer was did a lot of research when write the book, hence the information that they share for your requirements is absolutely accurate. You also could possibly get the e-book of Proceedings of the American Institute of Electrical Engineers Volume 26, p. 2 from the publisher to make you more enjoy free time.

Caleb Hutto:

The actual book Proceedings of the American Institute of Electrical Engineers Volume 26, p. 2 has a lot of information on it. So when you check out this book you can get a lot of advantage. The book was published by the very famous author. This articles author makes some research previous to write this book. That book very easy to read you can find the point easily after scanning this book.

Sandra Earnhardt:

Reading can called brain hangout, why? Because while you are reading a book specifically book entitled Proceedings of the American Institute of Electrical Engineers Volume 26, p. 2 your brain will drift away trough every dimension, wandering in every aspect that maybe unknown for but surely will end up your mind friends. Imaging every word written in a guide then become one form conclusion and explanation that maybe you never get just before. The Proceedings of the American Institute of Electrical Engineers Volume 26, p. 2 giving you one more experience more than blown away your head but also giving you useful info for your better life within this era. So now let us present to you the relaxing pattern at this point is your body and mind is going to be pleased when you are finished looking at it, like winning a casino game. Do you want to try this extraordinary shelling out spare time activity?

Kenneth Jordan:

As a scholar exactly feel bored to reading. If their teacher expected them to go to the library or even make summary for some publication, they are complained. Just small students that has reading's internal or real their passion. They just do what the instructor want, like asked to go to the library. They go to at this time there but nothing reading really. Any students feel that reading through is not important, boring as well as can't see colorful photos on there. Yeah, it is for being complicated. Book is very important in your case. As we know that on this period of time, many ways to get whatever we wish. Likewise word says, ways to reach Chinese's country. So , this Proceedings of the American Institute of Electrical Engineers Volume 26, p. 2 can make you truly feel more interested to read.
