Controversies in Neurological Surgery: Neurovascular Diseases (A Co-Publication of Thieme and the American Association of Neurological Surgeons)

This text provides insights into current trends and controversial issues regarding state-of-the-art techniques in neurosurgery, interventional neuroradiology, and endovascular surgery. The authors confront such questions as: Are unruptured aneurysms managed most effectively by neurosurgical clipping or endovascular coiling? Is surgery or endovascular coiling the best treatment for ruptured cerebral aneurysms of the anterior or posterior cerebral circulation? In managing arteriovenous malformations and fistulas, should clinicians use neurointerventional techniques or surgery, or a combination of both?

Highlights:

- More than 240 excellent illustrations, figures, and radiological images reviewing key concepts
- Detailed coverage of treatments for ischemic diseases, including extracranial and intracranial atherosclerosis
- Discussion of the organizational issues of integrating subspecialties and training subspecialists

This text also offers you the opportunity to earn valuable CME credits online. Neurosurgeons, neuroradiologists, neurologists, vascular surgeons, and specialists will find the book's balanced coverage of critical current issues in neurosurgery an indispensable aid in making informed decisions.
